

FOR A CONTEMPORARY FEEL

Silent Gliss

WAVE CURTAIN HEADING SYSTEM

Contemporary curtain design

Silent Gliss has created a unique curtain heading system that turns traditional curtains into a striking, modern design statement.

As an alternative to traditional pinch, pencil pleat or goblet style headings, Wave offers a more contemporary look throughout the curtain drop: when opened, the curtains stack back neatly, and when closed the fabric hangs in a smooth, continuous wave.

Together with our Silent Track curtain range, Wave offers the perfect interior design solution.

NEAT CURTAIN STACK-BACK

Undulating curves when your curtains are closed transform into a neat stack-back when opened.

Electric curtain tracks

Hand or cord curtain tracks

WAVE CURTAIN TRACKS

Wave is compatible with a variety of Silent Gliss systems:

- Electrically operated curtain tracks
- Hand or cord operated curtain tracks

**The reinvention of
the classic curtain.**

WAVE CURTAIN FABRICS

Silent Gliss offers a wide range of flame retardant fabrics which have been tested and proven to work well with our Wave curtain heading.

If non-Silent Gliss fabrics are being selected it is important to seek professional advice since not all fabrics are suitable for Wave curtains.

Silent Gliss fabrics Colorama 1 and 2 are proven to give an exceptional wave effect throughout the full drop of the curtain. Both transparencies are available in over 40 colours.

Fabrics for high-end curtain demands.

80mm

60mm

PLANNING YOUR CURTAIN – GLIDER SPACING

The wave effect is achieved by a unique glider-cord contained inside the curtain track which stops the fabric being pulled flat when the curtains are closed.

The evenly spaced gliders ensure a continuous wave effect throughout the full width and drop of the curtains.

Choose from 80mm or 60mm spaced glider cord:

- 80mm gives larger, more defined waves and is perfect for long curtain drops and heavier fabrics. The deeper waves result in a smaller curtain stack but you should allow a minimum fitting space of 160mm.
- 60mm creates a shallower wave and lends itself to short curtains and lightweight fabrics. You should allow a minimum fitting space of 120mm.

Curtains that dress themselves.

The Architects of Silence

Silent Gliss is the leading global supplier of premium interior window treatment systems.

With cutting edge technology and a relentless commitment to precision, we develop and manufacture the world's quietest, smoothest-gliding curtains and blinds.

Driven by our customers' needs, Silent Gliss provides bespoke curtain and blind systems complemented by expert technical advice, installation and support services. Silent Gliss stands for innovative solutions, exceptional design and outstanding quality. Swiss engineered since 1952.
